

# Mounting Instructions

## For your Wall Mounted klotzaufklotz Product

Unfortunately, we are unable to come to your home and mount your product for you! We have, however, provided you with detailed instructions on how to. If you encounter any difficulties, don't hesitate to contact us for advice.

### Step 1: measure gap

Measure the gap between the two round holes of the mounting system with a measuring tape or a long ruler. Take measure from the centre of the hole.

### Step 2: transfer to the wall

Transfer the measurements to the wall with a pencil and the help of a spirit level.

### Step 3: screwing

Drill the holes, put the wall plugs in and then the screws. Let the screws stick out 3-5mm. Last, mount your wooden product and in case it's still too loose, drive the screws further in.
